

DOCUMENTATION FOR POLYGLOT

Polyglot opening book reading

It opens a book to find all entry for the start position and their Weight (score to the winner)

class **chess.polyglot.Entry**

An entry from a Polyglot opening book.

key

It displays the position.

raw_move

The raw binary representation of the move. Use the **move()** method to extract a move object from this.

weight

An integer value that can be used as the weight for this entry.

learn

Another integer value that can be used for extra information.

move(*, *chess960=False*)

Gets the move (as a **Move** object).

The Polyglot function helps us to read and compare weights in order to return the movement with the heaviest weight (the winner)
